New human kinase proteins and nucleic acids, useful in drug screening

assays, identifying modulators of kinase activity or treating c characterized by absence or unwanted expression of the protein.

Claim 4; Fig 1; 81pp; English

The invention relates to isolated human kinase proteins and nucleic acids. The nucleic acid and peptide sequences can be used as models for the development of human therapeutic targets, aid in the identification of therapeutic proteins and serve as targets for the development of human cof therapeutic agents that modulate kinase activity in cells and tissues that express the kinase. The nucleic acids are useful as probes or primers, in constructing recombinant vectors, for expressing antigenic portions of the proteins, chromosome mapping, drug screening, testing an containing cells that are aberrant in kinase gene expression. The proteins may be used in drug screening assays, in the identification of compounds that mall are aberrant in kinase gene expression. The proteins may be used in drug screening assays, in the identification of compounds that canalysis, in treating disorders characterised by an absence or unwanted analysis, in treating disorders characterised by an absence or unwanted canalysis, in treating disorders characterised by an absence or unwanted differentiated adenocarcinoma), and in generating antibodies specific for the peptides. Such antibodies can be used to detect the protein in situ, in vitro, or in cell lysate or supernatant, to isolate and purify the protein from host cells, pharmacogenomic analysis, tissue typing, and in this ting protein function. The present sequence is human protein cDNA. Human kinase protein gene is located on chromosome 5

The sequences can be used in the diagnosis and treatment of malignant tumours, haemopathy, human immunodeficiency virus (HIV) infection, immunological diseases and various types of inflammation. The present sequence is the cell cycle regulating protein 53 coding sequence

polypeptides respectively. The HPKM polypeptides can be produced recombinantly by standard recombinant methodology. Protein kinases add phosphate groups to proteins. HPKM polypeptide or an HPKM antagonist is used to treat or prevent cancer or an immune disorder. The present sequence represents the nucleotide sequence of HPKM-3

The nucleic acids and the protein kinases they encode may be used in the treatment and diagnosis of diseases associated with inappropriate kinase expression such as immune-related diseases and disorders, cardiovascular disease, neurodegenerative diseases and/or cancers. The mucleic acids and complementary sequences may also be used as DNA probes in diagnostic assays. The kinase polypeptides may be used as nitigens in the production of antibodies of kinase expression and activity. Anti-kinase antibodies and kinase antagonists may also be used to down regulate kinase appression and activity include activity. Diseases related to kinase expression and activity include rheumatoid arthritis, atherosclerosis, autoimmune disorders, complications of organ transplantation, myocardial infarction, immune disorders, cardiomyopathies, strokes, renal failure, oxidative-

The invention relates to a compound comprising a sequence comprising 8-80 base pairs (bp) targeted to a nucleic acid encoding MARK3 (MAPK) microtubule affinity-regulating kinaes 3), that specifically of MARK3, i.e. is an antisense oligonucleotide (AO). Also included are a composition comprising the compound and a carrier or dilumet, inhibiting the expression of MARK3 in cells or tissues, treating an animal having or suspected of having a disease or condition associated with MARK3 and suspected for an antisense compound. The antisense oligonucleotide is useful for preparing a composition for treating hyperproliferative disease. The present sequence is a MARK3 associated with marks and acreening for an antisense compound. The antisense oligonucleotide is useful for preparing a composition for treating hyperproliferative disease. The present sequence is a MARK3 associated cDNA included in the figures but not mentioned anywhere else in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New antisense compound targeted to a nucleic acid molecule encoding microtubule-affinity-regulating kinases (MARK3), useful for modulating expression of MARK3 or for treating cancer or Alzheimer's disease.

A protein of the invention has antiiniflammatory, antiarthritic, antirheumatic, immunosuppressive, costeopathic, antidiabetic, dematological, antipsoriatic, antiallergic, antiasthmatic, hepatotropic, and respiratory activity. A polymoleotide of the invention may have a use in gene therapy. The PRO polypeptide, its agonist, antagonist, or antibody that specifically binds to the capping useful for treating an immune related disorder such as systemic lupus erythematosus, rheumatoid arthritis, osteoarthritis, it invenile chronic arthritis, a spondyloarthropathy, systemic sclerosis, an idiopathic inflammatory myopathy, Sjogran's syndrome, systemic sclerosis, and idiopathic inflammatory myopathy, slogran's syndrome, antoimmune chronic aflease, a demyelinating disease of the central or peripheral nervous system, idiopathic demyelinating polymeuropathy, dullain-Barre syndrome, contonic inflammatory demyelinating polymeuropathy, a hepatobiliary contonic inflammatory demyelinating polymeuropathy, defined the control character in the control char

and activator of transcription 6 activation (5TAT6). The protein is useful for the producing an antibody, which involves administering the protein or its epitope-bearing fragments to a non-human animal as an antigen. The nucleic acid is useful for diagnosing a disease or susceptibility to a disease related to expression or activity of the protein. A transformant expressing the protein is useful for screening compounds which inhibit or promote STATG activation. A transformant expressing the protein is useful for producing a pharmaceutical composition. Compositions, antibodies and antisense molecules are useful for the treating a disease associated with STATG activation such as
                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to a purified protein promoting signal transducer
                                                                                                                                                                                                                                                                                    New signal transducer and activator of transcription 6 activation promoting purified protein, for diagnosing and treating disease associated with activation/inhibition of transcription factor e.g.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               AAAGATCCAGGAGTATAGAGGATGATGATGAGGGGTCACCTGATCTGTCAAAGTGGAGACG 384
allergic diseases, inflammation, autoimmune diseases, diabetes, hyperlipidaemia, inflammation, autoimmune diseases, diabetes, hyperlipidaemia, infections disease and cancers. Compositions are useful for treating disease ascordated with STATE activation and/or prevention of Thi hyperactive diseases. Compositions are also useful in rheumatoid altergic rhinitis, ischemic luques erythematosus, sepsis, asthma, allergic rhinitis, ischemic luques erythematosus, sepsis, asthma, viral hepatitis and AIDS. The protein has efficient promoting STATE activity. The protein or nucleic acid is effectively useful for screening compounds for treating and preventing disease associated with excessive activation or inhibition of STATE. The present sequence represents a human cDNA encoding a protein which promotes STATE activation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       GICATTATTTAGAAGCAAGGTCCTTGAATGAGCGAGATTATCGGGACCGGAGATGTTG

The invention relates to a purified protein promoting signal transducer and activator of transcription 6 activation (STAT6). The protein is useful for the producing an antibody, which involves administering the protein or its epitope-bearing fragments to a non-human animal as an antigen. The muclaic acid is useful for diagnosing a disease or susceptibility to a disease related to expression or activity of the protein. A transformant expressing the protein is useful for screening compounds which inhibit or promote STAT6 activation. A transformant compounds which inhibit or promote STAT6 activation are useful composition. Compositions, antibodies and antisense molecules are useful composition. Compositions, antibodies and antisense molecules are useful for the treating a disease associated with STAT6 activation such as allergic diseases, inflammation, autoimmune diseases, diabetes, hyperlipidaemia, infections disease and cancers. Compositions are useful for treating disease associated with STAT6 activation and/or prevention of Th1 hyperactive diseases. Compositions are also useful in rheumatoid allergic rhinitis, ischaemic heart diseases, submarachnoid haemorrhage, viral hepatitis and AIDS. The protein has efficient promoting STAT6 activation or inhibition of STAT6. The present sequence represents a curivation or inhibition of STAT6. The present sequence represents a human cDNA encoding a protein which promotes STAT6 activation.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   엄
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to the isolation of genes AACS9277-CS9325 encoding 49 human secreted proteins AAB33718-B33764. The genes can be used to generate fusion proteins by linking to the gene for the human compared to immunoglobulin G FC portion (SEQIDI) for increasing the stability of the immunoglobulin G FC portion (SEQIDI) for increasing the stability of the fusion protein as compared to the human protein only. The genes and conditions, e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic a range of human tissues disclosed in the specification. The nucleic diagnosis, treatment and prevention of: (a) cancer, e.g. breast and covarian cancer, and other cancers of the adrenal gland, bone, bone cancers, gastroinestinal tract, liver, lung, or urogenital, (b) immune disorders e.g. Addison's disease, allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, comultiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c) cardiovascular diseases e.g. ecrebral anoxia and epilepsy; and (f) infectious diseases e.g. ecrebral anoxia and epilepsy; and (f) infections diseases e.g. ecrebral anoxia and epilepsy; and (f) infections diseases such as viral, fungal and parasitic (f)

```

The invention relates to a composition comprising a plurality of CDNAs for detecting the altered expression of genes in an immunological cresponse. The invention also relates to a method of diagnosing or monitoring the invention also relates to a method of diagnosing or monitoring the treatment of an immunopathological condition in a sample, comparising obtaining nuclaic acids from a sample, contacting the nuclaic acids of the sample with an array comprising the plurality of cDNAs under conditions to form one or more hybridisation complexes, detected to EDNAs under conditions to form one or more hybridisation complexes and recent leavel of the detected hybridisation complexes with the level of hybridisation complexes correlates with the presence of an immunopathological condition. Also disclosed are an expression profile comprising a microarray and a plurality of detectable complexes and a method for identifying a plurality of polynucleotide probes. The CDNAs are useful as hybridisable array elements in a microarray for monitoring the expression of target polynucleotides. The microarray for monitoring the expression of target polynucleotides. The microarray for monitoring the expression of the timmunopathology, such as Crohn's diseases, asthma, culcarative colitis, hypercosinophila, irritable bowel syndrome, carcinogenicity studies, forensics or pharmacogenomics. The composition may also be used in fluy discovery and development, toxicological and carcinogenicity studies, forensics or pharmacogenomic fragments. This sequence represents a human cDNA of the invention. Note: The sequence data for this patent did not form part of invention. Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic format directly formation. the printed specification but was obtained in from USPTO at segdata.uspto.gov/sequence.html.

compounds which inhibit or present or expression or activity of the spread or a disease related to expression or activity of the susceptibility to a disease related to expression or activity of the protein. A transformant expressing the protein is useful for screening compounds which inhibit or promotes TATAT activation. A transformant expressing the protein is useful for producing a pharmaceutical composition. Compositions is untibodies and antisense molecules are useful for the treating a disease associated with STATAT activation such as allergic diseases, inflammation, autoimmune diseases, diabetes, byperlipidaemia, inflammation, autoimmune diseases, diabetes, composition and/or prevention of Thi hyperactive diseases. Compositions are also useful in rhewmatoid arthritis, osteoarthritis, systemic lupus erythematosus, sepsis, asthma, allergic rhinitis, ischaemic heart diseases, subarachnoid haemorrhage, viral hepatitis and AIDS. The protein has efficient promoting STATE compounds for treating and preventing disease associated with excessive activation or inhibition of STATE. The present sequence represents a continuation.
                                                                                                                                                                                                                                                                                                                                                                   STATE; immunogen; STATE activation; allergy; inflammation; autoimmune disease; diabetes; hyperlipidaemia; infection; cancer; ful hyperactive disease; rheumatoid arthritis; osteoarthritis; systemic lupus erythematosuu; sepsis; asthma; allergic rhinitis; ischaemic heart disease; subarachnoid haemorrhage; viral hepatitis; AIDS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      for screening
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to a purified protein promoting signal transducer and activator of transcription 6 activation (STRT6). The protein is useful for the producing an antibody, which involves administering the protein or its epitope-bearing fragments to a non-human animal as an
                                                                                                                                                                                                                                                                                                                                           activator of transcription
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New signal transducer and activator of transcription 6 activation promoting purified protein, for diagnosing and treating disease associated with activation/inhibition of transcription factor e.g.
                                                                                                                                                                                                                                                                           Human cDNA encoding protein that promotes STAT6 activation #55
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 activation or inhibition of STAT6. The present sequence repres
human cDNA encoding a protein which promotes STAT6 activation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Ä
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 1865 BP; 629 A; 309 C; 381 G; 546 T; 0 U; 0 Other;

The invention relates to a method of identifying compounds that influence fat cell number or size comprising providing a cell that expresses a gene and an agent, exposing the cell to the agent and identifying fat cell number or size relative to cells not exposed to the agent. The method also comprises providing an expression vector and an agent, exposing the vector to the agent, detecting a change in expression of the gene call attive to expression of the gene in an expression vector not exposed to the agent, treating a subject with the agent and identifying fat cell number or size in the subject comprises an antisense coligonucleotide. The subject comprises a mammal, preferably a human. The method also comprises providing a polypeptide and an agent, exposing the colypeptide to the agent, detecting binding of the agent to the subject that agent and identifying fat cell number or size in the subject unth the agent and identifying fat cell number or size in the subject. The agent comprises an antibody. A method of regulating fat cell number or size comprises providing a subject containing fat cells and an agent that changes the expression of a gene, and treating the subject with the agent under conditions so that fat cell size or number in the

New human kinase proteins and nucleic acids, useful in drug screening assays, identifying modulators of kinase activity or treating disorders characterized by absence or unwanted expression of the protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to isolated human kinase proteins and nucleic acids. The nucleic acid and peptide sequences can be used as models for the development of human therapeutic targets, aid in the identification

```
therapeutic agents that modulate kinase activity in cells and tissues
that express the kinase. The nucleic acids are useful as probes or
that express the kinase. The nucleic acids are useful as probes or
primers, in constructing recombinant vectors, for expressing antigenic
portions of the proteins, chromosome mapping, drug screening, testing an
individual for a genotype, and for gene therapy in patients containing
cells that are aberrant in kinase gene expression. The proteins may be
used in drug screening assays, in the identification of compounds that
modulate, stimulate or inhibit kinase activity, in pharmacogenomic
analysis, in treating disorders characterised by an absence or unwanted
corpusation of the protein (bone osteosarcoma, or colon-moderately
differentiated adenocarcinoma), and in generating antibodies specific for
the peptides. Such antibodies can be used to detect the protein in situ,
in vitro, or in cell lysate or supernatant, to isolate and purify the
proteins from host cells, pharmacogenomic analysis, tissue typing, and in
inhibiting protein function. The present sequence is human kinase protein
of therapeutic proteins and serve as targets for the development of human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 21234 BP; 6065 A; 3772 C; 4258 G; 7139 T; 0 U; 0 Other;

Consortium/LIANL at: http://image.llnl.gov Series: IRAK Plate: 15 Row: d Column: 16
This clone was selected for full length sequencing because it passed the following selection criteria: matched mRNA gi: 10190705
This clone has the following problem: frame shifted.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         info@bcgsc.bc.ca

1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime end enriched, double-strand cDNA was digested with Not I and cloned into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library was normalized. Library was constructed by Life Technologies, a division of Invitrogen.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           917
                                                                                                                                                                                                                                                                                                            143
                                                                                                                                                                                                                                                                                                                                           296
